

First Website: Alex Brodsky

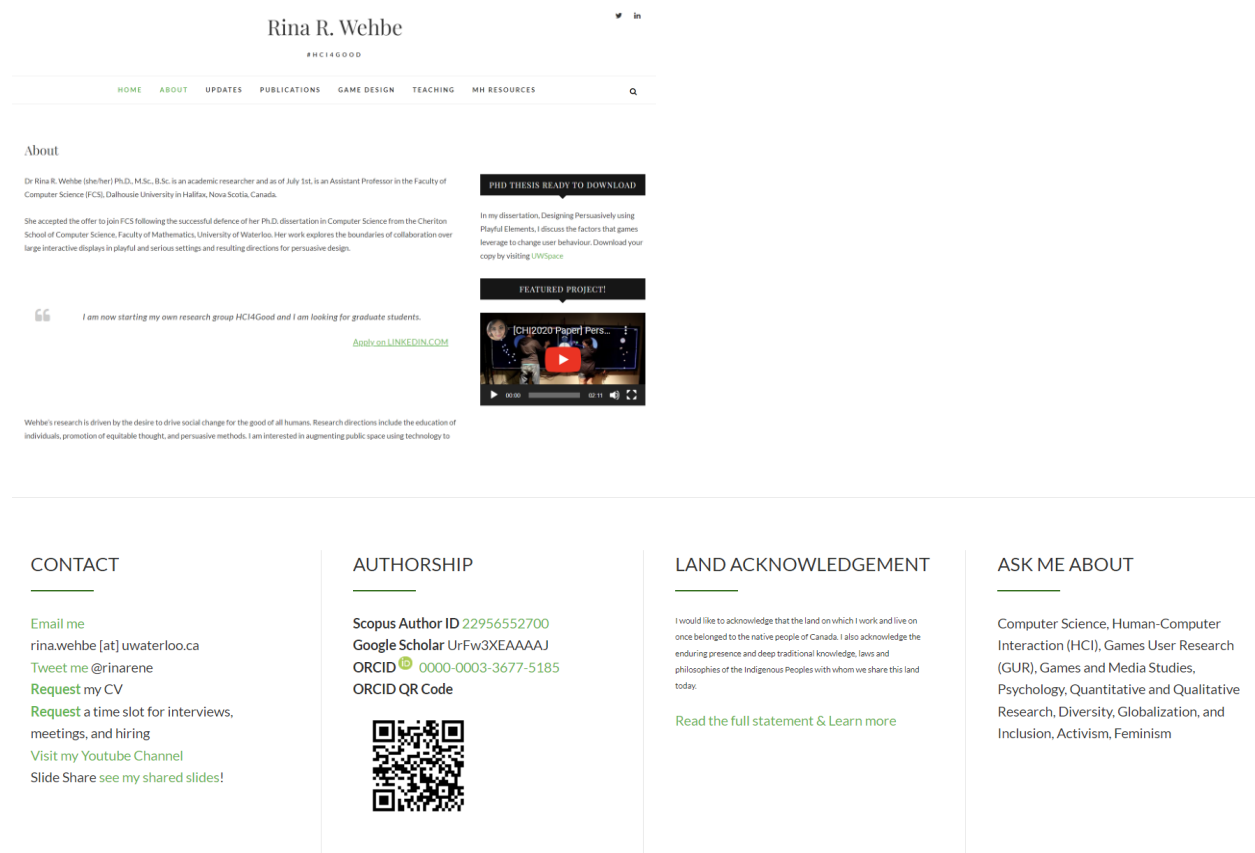

URL: <https://www.alexbrodsky.com/#coaching>

This is a personal portfolio website which contains a brief description of Alex Brodsky. I loved the way the website is built with few simplistic animation such as the description section takes the place of the header when it is scrolled up. Also, the idea of side menu bar containing blog, contacts and how it navigates to the exact section is a very good approach to user experience. Also, the color tonality of the text and background color is very pleasant to eyes as it does not break the contrast and gives the website an aesthetic look. At the bottom, footer is quite simple but goes perfectly with the whole website. And finally, the way of dissecting every section is very prominent as it is very easy to differentiate every section by just looking at the website.

Second Website: Rina R. Wehbe

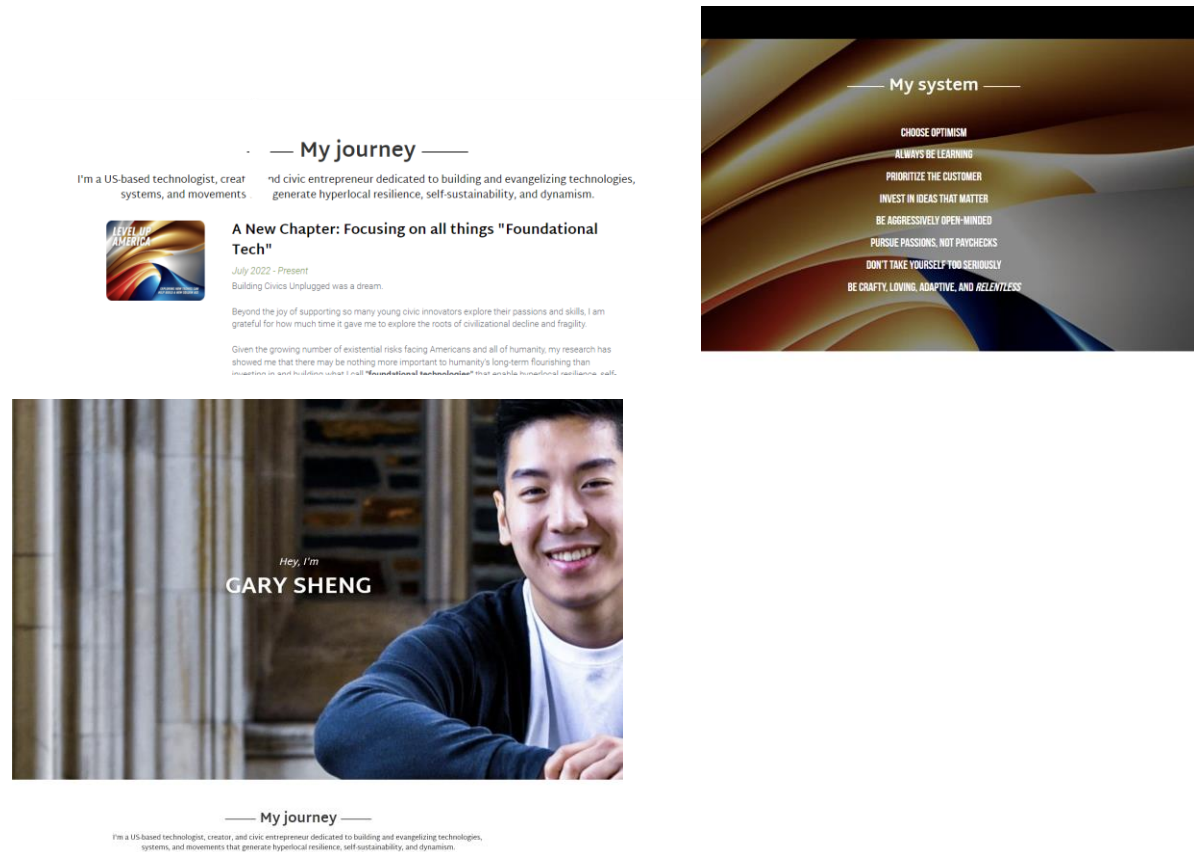

URL: <https://rinawehbe.ca/>

This is a personal portfolio website which contains about Dr. Rina Wehbe, her publications, game designs and so on. Firstly, I loved the way of changing color while you hover on the menu bar contents. I also loved the way that how contents are well organized at the right side of the body (Video and thesis). I also liked the way of fitting contact, authorship, land acknowledgment and ask me about at one row. And the way of using the color was quite simple and fits with the whole sense of a simplistic vision to portray a pleasant looking portfolio.

Third Website: GARY SHENG

URL: <https://www.garysheng.com/>

The portfolio website of Gary Sheng contains few good elements that I really love. Firstly, the scroll button at the bottom right corner which really enhance the user experience. Secondly, I loved the way how he circled the border of the content image on every section. In addition to that, every material that has been used in this website is center aligned which really makes it clean and organized. In my perspective, the website could use different color or gradient on my system text because it is hard to read due to the background image and because of that it is slightly hard to read the lines. However, hovering over the lines changes it colors to blue which looks nice. On the other hand, the footer could have different color rather than white but overall, it is a very simple and pleasant looking website which has less functionality but a great simple approach towards making a personal portfolio with only HTML and CSS.
